Real estate agents use several outside services to assist them in marketing property listings. Two of those services are photography and video production.

The Photographer Integrated Services will provide several features. This functionality document covers Part 1 below. Part 2 mockups will be provided soon.

Part 1. Photographers will have a site: https://services.cbone.me where:

- They can post their sales profile (to attract agents to buy their photographic services)
- Receive photography service requests from agents for their property listings
- Upload the photos for the specific listings once they taken the pictures
- Apply to be included in the program
- Photographers will NOT have user credentials on www.cbone.me. All of their work will be on https://services.cbone.me.

Part 2. Agents will interact with the photographer's via the www.cbone.me site.

- The photography services will be available by clicking the currently hidden LMS Tool Grid "Photography" tile at /manage-listing/*
- If there is only 1 photographer serving the agent's region they will see that photographer's profile (integrated and from services.cbone.me)
- If there are 2 or more photographers serving the agent's region they will see a stylized list of the photographers with links to their profiles.
- After selecting a photographer (or from the photographer's profile) the agent will be able to contact the photographer. That contact will be stored in the www.cbone.me database as well as the services.cbone.me database. This is so both the agent and photographer can review the referral notices.
- Once the photographer completes the photography and posts the images for the listing on services.cbone.me, the LMS Photo tool will add a link "Import new photos from [photographer name]". This will work in a similar fashion as the current photo import tool that interfaces with the daily NRT Photo Feed.
- When the agent imports the photos a flag will also be set on services.cbone.me so the photographer would be advised of the status.

The services.cbone.me site is located on host2.escalet.com

UID 1 account: Escalet esc*******6

An SSL certificate will be provided in the coming days.
